

European Legislation Identifier (ELI) Uniform Resource Identifier (URI) Standard for the electronic Irish Statute Book (eISB).

What is it?

The European Legislation Identifier (ELI) is a semantic web solution¹ that enables direct access to specific national legislation through a structured, flexible identifier. It creates a common system to identify legislation and its metadata. ELI sets out unique identifiers, metadata and a recommended ontology that, when applied to online legislation, produces a structured reference to legislation that is recognisable, readable and understandable by humans and computers, allowing greater and faster exchanges of data and information.

This document sets out the implementation of the three phases (pillars) of the ELI standard on the eISB.

For more detailed information on the ELI standard please see the ELI register page on the EUR-Lex web site – [Link to the ELI register page here](#).

How will it affect the access to the electronic Irish Statute Book?

Access to the electronic Irish Statute Book (eISB) will not change. Where information is linked to the eISB using the old addressing system a redirection process will automatically provide access to the legislation at the new address. Following the implementation of the ELI URI standard, all new linked references to legislation on the eISB will use the new standard.

The three pillars of the European Legislation Identifier

The specifications of ELI have three components, referred to as the three pillars:

Pillar I: identification of legislation: HTTP URI templates at the European, national and regional levels based on a defined set of components.

Pillar II: metadata properties describing legal resources: Definition of a set of metadata and its expression in a formal ontology.

¹ The Semantic Web (also named Web 3.0) is a network of data that enables machines to understand the semantics (i.e. meaning) of information published on the Web. It extends the network of human-readable Web pages (e.g. published in HTML) by inserting machine-readable metadata about that published information and how it relates to the content in other pages, thereby enabling automated agents to access the Web more intelligently and perform tasks on behalf of users.

Pillar III: rendering the ELI metadata machine-reusable: Integration of metadata into the legislative websites.

When will the first phase of the ELI go live on the eISB?

The first phase of the ELI implementation i.e. the standard for the Uniform Resource Identifiers (URI) went live in September 2015.

What about the second and third pillars?

The second pillar has been completed by identifying the relevant ELI metadata properties that apply for the eISB and these values are now documented in the **eISB metadata ontology** on pages 11 and 12.

The third pillar consisting of the serialisation of metadata (i.e. marked up appropriately in RDFa and embedded in the HTML pages) has been completed for 2016 and will be updated for new legislation going forward. An example of this mark-up is available on page 13.

The RDFa metadata can be viewed through a browser extension. One example is The OpenLink Structured Data Sniffer (OSDS) which is a browser extension for Google Chrome, Mozilla Firefox, and Opera (with builds planned for Apple Safari, and Microsoft Edge) that unveils metadata oriented structured data embedded within HTML documents.

The ELI steering committee, through the EU Office of Publications, has published two manuals that cover implementation of ELI in detail;

More Information on the ELI URI schema

Information on the structure of the ELI URI schema and how it will be implemented on the eISB is set out below.....

ELI URI general template components

	Name	Comments
	eli	
Jurisdiction	Jurisdiction	Use of DCTERMS.ISO3166 : 2 alpha country codes, e.g. 'LU' For international organisations, the registered domain name can be used: e.g. 'EU' or 'WTO'
	Agent	Administrative hierarchical structure, e.g. Federal States, constitutional court, parliament, etc.
	Sub-agent	Administrative hierarchical substructure, e.g. the responsible ministry
Reference	Year	YYYY Various interpretations allowed depending on countries' requirements, e.g. date of signature or date of publication, etc.
	Month	MM
	Day	DD
	Type	Nature of the act (law, decree, draft bill, etc.) Various interpretations depending on countries' requirements
	Sub-type	Sub-category of an act depending on countries' requirements (e.g. corrigendum)
	Domain	Can be used if acts are classified by themes, e.g. codes
	Natural identifier	Reference or number to distinguish an act of same nature signed or published on the same day
Subdivision	Level 1	Reference to a subdivision of an act, e.g. Article 15
	Level 2	Reference to a smaller subdivision than level 1, e.g. Article 15.2
	Level 3	Reference to a smaller subdivision than level 2
	Level n	Reference to a smaller subdivision
Point in time	Point in time	YYYYMMDD Version of the act as valid at a given date
Version	Version	To distinguish between original act or consolidated version
Language	Language	To differ different official expressions of the same act Use of DCTERMS.ISO3166 : 3 alpha

The exact syntax of the URI standard is as follows;

```
/eli/{jurisdiction}/{agent}/{sub-agent}/{year}/{month}/{day}/{type}/{Natural identifier}/{Level 1...}/{Point in Time}/{Version}/{language}
```

Using the above as a template the following edited syntax is required for the eISB;

```
/eli/{year}/{type} / {Natural identifier} / {Level 1...} / {Version} / {Point in Time} / {language}
```

These elements would contain the following values;

name	format	value	comments
Year	yyyy	2014	
Type	act prv ca si sro cons	Public Act Private Act Constitutional Amendment Statutory Instrument Statutory Rules, Orders and Regulations Constitution	(1948 – date) (1922 – 1947)

Note: For SRO's with duplicate numbers assigned, the addition of the suffix "a"... "b"... "c"... etc to the {Natural identifier} will be applied for URI identification purposes only. These identifiers will not be displayed in the on-line lists.

Name of Revised Act: Public Transport Regulation Act 2009 (37/2009)

Applied eISB Unique Resource Identifier (URI) standard

{year}	{type}	{Natural identifier}	{Level 1...}	{Version}	{Point in Time}	{language}
2009	act	37		revised	YYYYMMDD	en

Full URI: <http://www.irishstatutebook.ie/eli/2009/act/37/revised/2013-12-03/en>

Note: {Point in Time} component relates to date of latest revision however a URI not containing the {Point in Time} should always resolve to the latest version.

Constitution: Latest version of the Constitution (Irish language)

Applied eISB Unique Resource Identifier (URI) standard

{type}				{Point in Time}		{language}
cons						ga

Full URI: <http://www.irishstatutebook.ie/eli/cons/ga>

Note: Latest version relates to the latest printed version

Constitution: Article 16 of the Constitution as at 01-11-2013 (English language)

Applied eISB Unique Resource Identifier (URI) standard

{type}			{Level 1...}	{Point in Time}		{language}
cons			Article/16	YYYYMMDD		en

Full URI: <http://www.irishstatutebook.ie/eli/cons/article/16/2013-11-01/en>

Note: {Point in Time} component relates to date of printed version

Publishing yearly lists of legislation

Using the ELI URI standard a yearly list of legislation is displayed by the following URI syntax;

`/eli/{year}/{type – “act” or “si”}`

Examples

<http://www.irishstatutebook.ie/eli/2014/act>

(will display the list of Acts (public, private and constitutional amendments) for 2014 including bi-lingual Act titles if applicable)

<http://www.irishstatutebook.ie/eli/2014/si/>

(will display the list of Statutory Instruments for 2014)

Multiple format versions

A representation URI should reference various document formats for that piece of legislation
